CUSTOMCLAD SERVICE, CUSTOMISED TO YOU

CustomClad offers a unique way to purchasing composite insulated panels, please contact the office to discuss all of the services that the CustomClad service offers – plywood bonded under the steel surface for ease of fixing items to the panel face; aperture cut outs and conduits within the core for hidden cables; socket and light switch cut-outs within panels; panels cut to width and modular options to mention only a few.

We were grateful to receive a personal thank you from the end user to the Isoclad Managing Director, Mike McColl reading:

“Please thank the whole team at Isoclad and CustomClad for their efforts in supplying a complete system that enabled my business to operate without any interruption due to the fact that every insulated panel arrived on site cut to length and width with apertures where required.

The professionalism of Isoclad was sublime and I take this opportunity to express my appreciation.

While we are unlikely to use Isoclad again, as this was a one off project, I can assure you that I will take every opportunity to promote your business as often as I can.”

This project utilised a total of 5,320m² of the Isoclad composite panel system ranging from 50mm thick ThermaCore to 150mm thick Firestop 10/12 core and was installed by an approved installation contracting team through a Main Contractor

The aesthetic finish of the panel system was white dust Free class zero spread of flame steel.

Could your business benefit from using the CustomClad service? Get in touch with Isoclad today to discuss your next application.
